Atty Dkt No. 3127 PUS

## COMPLETE LISTING OF THE CLAIMS

1. (Currently Amended) A container and lid assembly comprising:  
a base;  
a container body having a generally tapered wall structure extending upwardly from the base defining a compartment therein;  
a lid having a central portion and a flexible peripheral portion that is collapsibly deformable as the lid is moved along a predetermined range within the compartment toward the base, wherein the peripheral portion includes an outer portion having an upper free end abutting an inner surface of the wall structure and a downwardly extending middle portion having a lower end connected to a lower end of the outer portion.
2. (Original) The container and lid assembly of claim 1 wherein the peripheral portion at least partially circumscribes a central portion of the lid.
3. (Currently Amended) The container and lid assembly of claim 2 ~~wherein the peripheral portion includes an outer portion that abuts an inner surface of the wall structure and wherein the outer portion is moved toward the central portion as the lid is moved toward the base.~~
4. (Currently Amended) The container and lid assembly of claim 3 further including a hinge portion between the ~~outer~~middle portion and the lid.
5. (Original) The container and lid assembly of claim 4 wherein the hinge portion includes a portion of reduced thickness.
6. (Original) The container and lid assembly of claim 2 further including a handle formed in the central portion.
7. (Original) The container and lid assembly of claim 1 wherein the flexible portion includes a plurality of alternating upwardly and downwardly extending portions.

Atty Dkt No. 3127 PUS

8. (Currently Amended) The container and lid assembly of claim 1 wherein the flexible middle portion further includes an upper surface which would abut a base of a like container stacked thereon to urge the flexible free end of the outer portion outwardly against ~~an~~ the inner surface of the wall structure.

9-16. (Cancelled)

17. (Currently Amended) A container and lid assembly comprising:

a base;

a container body having a container wall extending upwardly and outwardly from the base to define a compartment therein;

a lid having a central portion and an integrally molded flexible portion, the flexible portion including an outer portion ~~for having an upper free end~~ abutting an inner surface of the container wall, the flexible portion permitting movement of the outer portion toward the central portion as the lid is moved toward the base in the compartment, a hinge portion connecting the flexible portion to the central portion, the hinge portion having an upper end on which a similar container would rest when stacked thereby urging the upper free end of the outer portion against the container wall.

18. (Original) The container and lid assembly of claim 17 wherein the flexible portion urges the outer portion toward the inner surface of the container wall.

19. (Original) The container and lid assembly of claim 17 further including a like container stacked on the lid and abutting the flexible portion to urge the outer portion against the inner surface of the container wall.

20. (Original) The container and lid assembly of claim 17 wherein the central portion further includes a handle.

21. (New) The container and lid assembly of claim 19 wherein the central portion includes a downwardly extending portion connected to the flexible portion.

Atty Dkt No. 3127 PUS

22. (New) The container and lid assembly of claim 21 wherein the flexible portion includes alternating upwardly and downwardly extending portions.

23. (New) The container and lid assembly of claim 22 wherein the flexible portion includes a hinge portion, the like container resting on the hinge portion to urge the outer portion against the inner surface of the container wall.
